C. WHAT ARE THE INVESTMENT STRATEGIES?

Con. Std. Obs. 27

Subject to the Regulations and other prevailing laws as applicable, the scheme is a passive investment strategy is aimed at optimizing risk adjusted return through investments in units of The Wealth Company Gold ETF and The Wealth Company Silver ETF.

The allocation will be based on an in-house model using the Gold and Silver prices. However, the fund manager retains the discretion to adjust the allocation based on other relevant macro factors.

The scheme may invest in Money Market Instruments & Units of Mutual Fund primarily for Liquidity purposes as well as for the purpose of meeting redemptions.

Portfolio Turnover:

The Scheme being an open-ended Scheme, it is expected that there would be a number of subscriptions and redemptions on a daily basis. The fund management team depending on its view and subject to there being an opportunity, may trade in securities, which will result in increase in portfolio turnover. There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. However, the cost would be negligible as compared to the total expenses of the Scheme.

Frequent trading may increase the profits which will offset the increase in costs. The fund manager will endeavour to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to estimate with reasonable measure of accuracy the likely turnover in the portfolio of the Scheme. The Scheme has no specific target relating to portfolio turnover.

1) RISK MEASUREMENT / CONTROL:

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of SEBI regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The AMC has systems that enable the fund manager to calculate various risk ratios, average duration etc.

The Investment Committee may from time to time define internal investment norms for the scheme. The Fund Management proposes to use analytic risk management tools like VAR/convexity/ modified duration for effective portfolio management.

Liquidity Risks

The liquidity of the Scheme's investments may be inherently restricted by trading volumes, transfer procedures and settlement periods. Liquidity Risk can be partly mitigated by diversification, staggering of maturities as well as internal risk controls that lean towards purchase of liquid securities.

Interest Rate Risk

Changes in interest rates affect the prices of bonds. If interest rates rise the prices of bonds fall and vice versa. A well-diversified portfolio may help to mitigate this risk. Hence, while the interim NAV will fluctuate in response to changes in interest rates, the final NAV will be more stable. To that extent the interest rate risk will be mitigated at the maturity of the scheme. Further, the Scheme may use Interest rate derivatives to mitigate the interest rate risks and rebalance the portfolio.

Credit Risks

Credit risk shall be mitigated by investing in rated papers of the companies having the sound background, strong fundamentals, and quality of management and financial strength of the Company.

Volatility Risks

There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The scheme will manage volatility risk through diversification. To that extent the Volatility risk will be mitigated in the scheme.

Credit Evaluation Policy

The credit evaluation policy of the AMC entails evaluation of credit fundamentals of each underlying exposure. Some of the major factors that could be evaluated are:

- Outlook on the sector
- Strength & Support of the Parent
- Quality of management
- Overall financial strength of the credit as determined by key financial ratios.

Ratings of recognized rating agencies are taken as a reference point in the credit evaluation process. Investments in bonds and debenture are made usually in instruments that have high investment grade ratings by a recognized rating agency.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The performance of the scheme will be benchmarked to the performance of the Domestic Price of Gold and Silver TRI.

Justification for use of benchmark : The scheme would be benchmarked against Domestic Price of Gold and Silver

The AMC/Trustees may change benchmark in future for measuring performance of the scheme and as per the guidelines and directives issued by SEBI from time to time.

The Trustee reserves the right to change the benchmark for the evaluation of the performance of the Scheme from time to time, keeping in mind the investment objective of the Scheme and the appropriateness of the benchmark, subject to the compliance with Regulations/ circulars issued by SEBI and AMFI in this regard from time to time.

Con. Std. Obs. 58

PART III: OTHER DETAILS**A. COMPUTATION OF NAV**

The Net Asset Value (NAV) of the Units will be determined daily or as prescribed by the Regulations. The NAV shall be calculated in accordance with the following formula, or such other formula as may be prescribed by SEBI from time to time.

$$\text{NAV} = \frac{\text{Market/Fair value of Scheme's Investments} + \text{Current Assets} - \text{Current Liabilities and Provisions}}{\text{No. of units outstanding under Scheme/ Plan}}$$

Illustration: Assumptions - on the day of calculation of NAV:

Market or Fair Value of the Scheme's Investments = 10600
Current Assets = 250
Current Liabilities & provisions = 150
No of units outstanding in the plan = 1000
NAV = $(10600+250-150)/1000 = 10.70$

Con. Std. Obs. 42

Methodology of calculating the sale price:

The price or NAV an investor is charged while investing in an open-ended scheme is called sale / subscription price. Pursuant to clause 10.4.1.a of the SEBI Master circular for Mutual Funds dated June 27, 2024, no entry load will be charged by the Scheme to the investors.

Therefore, Sale / Subscription price = Applicable NAV

Methodology of calculating the repurchase price

Repurchase or redemption price is the price or NAV at which an open-ended scheme purchases or redeems its units from the investors. It may include exit load, if applicable. The exit load, if any, shall be charged as a percentage of Net Assets Value (NAV) i.e. applicable load as a percentage of NAV will be deducted from the "Applicable NAV" to calculate the repurchase price.

Therefore, Repurchase / Redemption Price = Applicable NAV * (1 – Exit Load, if any) For example, If the Applicable NAV of the Scheme is Rs. 10 and the Exit Load applicable at the time of investment is 1% if redeemed before completion of 1 year from the date of allotment of units and the investor redeems units before completion of 1 year, then the repurchase/redemption price will be: = Rs. $10 \times (1 - 0.01) = \text{Rs. } 9.90$

Con. Std. Obs. 42

Rounding off policy for NAV:

Net Asset Value of the Units in the Scheme is calculated in the manner provided in this Scheme Information Document or as may be prescribed by Regulations from time to time. The NAV will be computed up to two decimal places.

The Fund will ensure that the Redemption Price is not lower than 95% of the NAV.

The valuation of investments shall be based on the principles of fair valuation specified in the Schedule VIII of the SEBI (Mutual Funds) Regulations, 1996 and guidelines issued by SEBI /AMFI from time to time. The broad valuation norms are detailed in the Statement of Additional Information.

The investor is requested to check the prevailing load structure of the scheme before investing.

Any imposition or enhancement in the load shall be applicable on prospective investments only. At the time of changing the load structure, the mutual fund may consider the following measures to avoid complaints from investors about investment in the schemes without knowing the loads:

- The addendum shall be circulated to all the distributors/brokers/Investor Service Centre (ISC) so that the same can be attached to all KIM and SID already in stock till it is updated.
- Latest applicable addendum shall be a part of KIM and SID. (E.g. in case of changes in load structure the addendum carrying the latest applicable load structure shall be attached to all KIM and SID already in stock till it is updated).
- Further, the account statements shall continue to include applicable load structure

In accordance with SEBI Regulations, the repurchase price will not be lower than 95% of the NAV

The investor is requested to check the prevailing load structure of the Scheme before investing.

B. RISK FACTORS**1. Standard Risk**

Con. Std. Obs. 8

a. Standard Risk Factors for investments in Mutual Fund

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down.
- Mutual Funds and securities investments are subject to market risks and there can be no assurance and no guarantee that the Scheme will achieve its objective.
- Past performance of the Schemes, the Sponsors or its Group / Affiliates / AMC / Mutual Fund does not guarantee the future performance of the scheme of the Mutual Fund.
- The sponsors are not responsible or liable for any loss resulting from the operations of the scheme beyond the initial contribution of Rs. 1 lakh made by them towards setting up of the mutual fund.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme, its future prospects or the returns.
- Growth, appreciation, IDCW and income, if any, referred to in this Scheme Information Documentary subject to the tax laws and other fiscal enactments as they exist from time to time.
- The NAVs of the Scheme may be affected by changes in the general market conditions, factors and forces affecting capital market, in particular, level of interest rates, various market-related factors, trading volumes, settlement periods and transfer procedures.
- IDCW, if any are/will be subject to the availability of distributable surplus of the Scheme.

b. Scheme Specific Risk Factors:

The Scheme is subject to the specific risks that may adversely affect the Scheme's NAV, return and / or ability to meet its investment objective. The specific risk factors related to the Scheme include, but are not limited to the following:

The Scheme shall invest in the units The Wealth Company Gold ETF and The Wealth Company Silver ETF. The risk factors of The Wealth Company Gold ETF and The Wealth Company Silver ETF will be relevant and must be treated as risk factors of The Wealth Company Gold Silver Passive FOF. The investors should refer to the Scheme Information Documents and the related addendum for the scheme specific risk factors and special consideration of the respective Underlying Schemes

The Scheme will predominantly invest in units of The Wealth Company Gold ETF and The Wealth Company Silver ETF. Hence the Scheme's performance may depend upon the performance of the underlying schemes. Any change in the investment policies or the fundamental attributes of the underlying schemes could affect the performance of the Scheme.

The investors of the Scheme will bear dual recurring expenses and possibly dual loads, viz, those of the Scheme and those of the underlying Scheme. Hence the investor under the Scheme may receive lower pretax returns than what they could have received if they had invested directly in the underlying Schemes in the same proportions. The TER of the Scheme shall be in compliance with the SEBI Mutual Fund Regulations.

The Portfolio disclosure of the Scheme will be limited to providing the particulars of the underlying schemes where the Scheme has invested and will not include the investments made by the underlying Schemes. However, as the scheme proposes to invest in The Wealth Company Gold ETF and The Wealth Company Silver ETF, the underlying assets will by and large be physical gold.

The value (price) of gold and silver may fluctuate for several reasons and all such fluctuations will result in changes in the NAV of units under the scheme. The factors that may affect the price of gold and silver, among other things, include demand and supply for gold and silver in India and in the global market, Indian and Foreign exchange rates, Interest rates, Inflation trends.

The fund assets are predominantly invested in The Wealth Company Gold ETF and The Wealth Company Silver ETF and valued at the market price of the said units on the principal exchange. The same may be at a variance to the underlying NAV of the fund, due to market expectations, demand supply of the units, etc. To that extent the performance of scheme shall be at variance with that of the underlying scheme.

The endeavor would always be to get cash on redemptions from the underlying schemes. However, in case the underlying schemes are unable to sell for any reason, and delivers physical gold and silver, there could be delay in payment of redemptions proceeds pending such realization.

The fund will subscribe according to the value equivalent to unit creation size as applicable for The Wealth Company Gold ETF and The Wealth Company Silver ETF. Alternatively, the ETF units may be acquired from the stock exchanges where the price quoted may be at variance with the underlying NAV, and which may result in higher acquisition cost. When subscriptions received are not adequate enough to invest in creation unit size, the subscriptions may be deployed in debt and money market instruments which will have a different return profile compared to domestic gold and silver and returns profile.

Risk factors associated with investing in debt and Money Market Instruments

The Scheme will invest in debt securities and money market instruments, which are subject to credit risk, interest rate risk, and settlement risk. Credit risk arises from the possibility that the issuer of a security may default on its payment obligations. Interest rate risk affects the valuation of money market instruments, while settlement risk may delay the realization of proceeds from the sale of these instruments.

- **Credit Risk:** Bonds / debentures as well as other money market instruments issued by corporates run the risk of down grading by the rating agencies and even default as the worst case. Securities issued by Central/State governments have lesser to zero probability of credit / default risk in view of the sovereign status of the issuer.
- **Interest - Rate Risk:** The Net Asset Value (NAV) of the Scheme, to the extent that it is invested in Debt and Money Market instruments, will be influenced by changes in general interest rates. A decrease in interest rates is expected to result in an increase in the NAV, while an increase in interest rates would adversely affect the NAV.
- **Liquidity Risk:** While money market instruments are relatively liquid, they lack a well developed secondary market, which may limit the Scheme's ability to sell these instruments and could result in losses until the securities are eventually sold.
- **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be

reinvested may be lower than that originally assumed.

- **Prepayment Risk:** Some fixed-income securities give the issuer the right to call back the securities before their maturity date, particularly in periods of declining interest rates. This prepayment risk may force the Scheme to reinvest the proceeds at lower yields, resulting in reduced interest income
- **Settlement Risk:** Different segments of the Indian financial markets have varying settlement periods, which may be extended due to unforeseen circumstances. Settlement delays could lead to periods where the Scheme's assets are uninvested, resulting in no returns. Additionally, the Scheme may miss certain investment opportunities if it is unable to make intended securities purchases due to settlement issues. Similarly, the inability to sell securities held in the Scheme's portfolio due to a lack of a well-developed and liquid secondary market for debt securities could result in potential losses if the value of these securities declines.
- **Systematic Risk**
The Scheme is exposed to systematic risks that affect the entire market, such as economic recessions, changes in interest rates, geopolitical tensions, and natural disasters. These risks cannot be mitigated through diversification, and any negative macroeconomic developments could impact the overall performance of the scheme.
- **Legal and Regulatory Risks**
Changes in laws, regulations, or accounting standards governing the scheme's operations could have adverse implications for the scheme and its investors. Regulatory actions, legal disputes, or changes in taxation could also affect the scheme's performance, NAV, and the investors' returns.
- **Risks associated with investment in units of mutual fund:**
Investment in Mutual Fund Units involves investment risks, including but not limited to risks such as liquidity risk, volatility risk, default risk including the possible loss of principal.
- **Liquidity risk** – The liquidity of the scheme's investments is inherently restricted by trading volumes and settlement periods. In the event of an inordinately large number of redemption requests, or of a restructuring of the scheme's investment portfolio, these periods may become significant. In view of the same, the Trustees may limit redemptions (including suspending redemptions) under certain circumstances as specified under the Scheme Information Document.
- **Volatility risks:** There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The scheme will manage volatility risk through diversification across companies and sectors within PSUs.
- **Default risk** - Credit risk is risk resulting from uncertainty in counterparty's ability or willingness to meet its contractual obligations. This risk pertains to the risk of default of payment of principal and interest. Government Securities have zero credit risk while other debt instruments are rated according to the issuer's ability to meet the obligations.

Risks associated with investing in ETFs:

ETFs are passively managed and may be affected by a general decline in the Indian markets relating to its Underlying Index. ETFs invests in the securities included in its Underlying Index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets.

ETFs are listed on a stock exchange/s, however, there can be no assurance that an active secondary market will develop or be maintained.

Investment in ETFs is subject to tracking error. Factors such as the fees and expenses of the Scheme, corporate actions, cash balance, changes to the Underlying Index and regulatory policies may affect the AMC's ability to achieve close correlation with the Underlying Index of the Scheme. The AMC will endeavour to constantly minimize the tracking error and track the index as closely as possible.

Risk associated with Tracking Error and Tracking Difference:

The Fund Manager would not be able to invest the entire corpus in physical gold and/ or silver due to certain factors such as the fees and expenses of the Scheme, corporate actions, cash balance, changes to the underlying index and regulatory restrictions, which may result in Tracking Error with the underlying index. The Scheme's returns may therefore deviate from those of the underlying index. "Tracking Error" is defined as the standard deviation of the difference between daily returns of the underlying index and the NAV of the Scheme. "Tracking Difference" is the annualized difference of daily returns between the goods and the NAV of the scheme (difference between fund return and the goods return). Tracking Error and Tracking difference may arise including but not limited to the following reasons:

- Expenditure incurred by the Fund.
- Available funds may not be invested at all times as the Scheme may keep a portion of the funds in cash to meet Redemptions, for corporate actions or otherwise. • Securities trading may halt temporarily due to circuit filters.
- Corporate actions such as debenture or warrant conversion, rights issuances, mergers, change in constituents etc.
- Rounding-off of the quantity of shares in the underlying index.
- Dividend payout.
- Index providers undertake a periodical review of the scrips that comprise the underlying index and may either drop or include new scrips. In such an event, the Fund will try to reallocate its portfolio but the available investment/reinvestment opportunity may not permit absolute mirroring immediately.

Con. Std. Obs. 10

SEBI Regulations (if any) may impose restrictions on the investment and/or divestment activities of the Scheme. Such restrictions are typically outside the control of the AMC and may cause or exacerbate the Tracking Error. It will be the endeavor of the fund manager to keep the tracking error as low as possible. However, in case of events like, dividend received from underlying securities, rights issue from underlying securities, and market volatility during rebalancing of the portfolio following the rebalancing of the underlying index, etc. or in abnormal market circumstances may result in tracking error. There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Index. The tracking error i.e. the annualized standard deviation of the difference in daily returns between the underlying index or goods and the NAV of the ETF/ Index Fund (other than Debt ETFs/ Index Funds) based on past one year rolling data shall not exceed 2%.

Risks associated with segregated portfolio:

Liquidity risk – A segregated portfolio is created when a credit event / default occurs at an issuer level in the scheme. This may reduce the liquidity of the security issued by the said issuer, as demand for this security may reduce. This is also further accentuated by the lack of secondary market liquidity for corporate papers in India. As per SEBI norms, the scheme is to be closed for redemption and subscriptions until the segregated portfolio is created, running the risk of investors being unable to redeem their investments. However, it may be noted that, the proposed segregated portfolio is required to be formed within one day from the occurrence of the credit event.

Investors may note that no redemption and subscription shall be allowed in the segregated portfolio. However, in order to facilitate exit to unit holders in segregated portfolio, AMC shall list the units of the segregated portfolio on a recognized stock exchange within 10 working days of creation of segregated portfolio and also enable transfer of such units on receipt of transfer requests. For the units listed on the exchange, it is possible that the market price at which the units are traded may be at a discount to the NAV of such Units. There is no assurance that an active secondary market will develop for units of segregated portfolio listed on the stock exchange. This could limit the ability of the investors to resell them.

Valuation risk - The valuation of the securities in the segregated portfolio is required to be carried out in line with the applicable SEBI guidelines. However, it may be difficult to ascertain the fair value of the securities due to absence of an active secondary market and difficulty to price in qualitative factors.

Risks associated with handling, storing and safekeeping of physical gold and / or silver:

All physical gold and / or silver procured must follow the LBMA guidelines as per prescribed SEBI guidelines. Risk arises when part or all of the gold and / or silver held by the Fund could be lost, stolen or damaged and access to gold and / or silver may be restricted due to natural calamities or human actions, loss or damage directly or indirectly occasioned by, happening through or in consequence of war, invasion, acts of foreign enemies, hostilities (whether war be declared or not), civil war, rebellion, revolution, insurrection, military or usurped power. Loss due to aridity, humidity, exposure to light or extremes of temperature. Hence, the Custodian maintains insurance in regard to the business on terms and conditions and the custodian is also responsible for all costs arising from the insurance policies. The custodian taking delivery on behalf of the AMC needs to ensure the weight, purity, and the source of gold and/or silver as specified under the LBMA guidelines. Since this is paramount to the SEBI guidelines the risk arises in violation of same. Safekeeping of physical gold and / or silver requires appropriate vaulting space, confirming to the best global standards. The vaulting agents engaged by the custodian needs to ensure the same.

Risks Related to the Custody of Gold and / or Silver

- The Custodian is responsible for the safekeeping of the gold and / or silver bullion and also facilitates the transfer of gold and / or silver bullion into and out of the vault. Although the Custodian is a market maker, clearer and approved weigher under the rules of the LBMA (which sets out good practices for participants in the bullion market), the LBMA is not an official or governmental regulatory body. Accordingly, the ETF is dependent on the Custodian to comply with the best practices of the LBMA and to implement satisfactory internal controls for its gold and / or silver bullion custody operations in order to keep the gold and / or silver bullion secure.
- The Custodian is responsible for loss or damage to the gold and / or silver only under limited circumstances. The Custodian Agreement contemplates that the Custodian will be responsible to the AMC only if it acts with negligence, fraud or in willful default of its obligations under the Custodian Agreement. In addition, the Custodian has agreed to indemnify the Trust for any loss or liability directly resulting from a breach of the Custodian's representations and warranties in the Custodian Agreement, a failure of the Custodian to act in accordance with the instructions or any physical loss, destruction or damage to the gold and / or silver held for the Trust's account, except for losses due to nuclear fission or fusion, radioactivity, war, terrorist event, invasion, insurrection, civil commotion, riot, strike, act of government or public authority, act of God or a similar cause that is beyond the control of the Custodian for which the Custodian will not be responsible to the AMC. The Custodian's liability to the AMC, if any, will be limited to the value of any gold and / or silver lost, or the amount of any balance held on an unallocated basis, at the time of the Custodian's negligence, fraud or willful default, or at the time of the act or omission giving rise to the claim for indemnification.
- Neither the Shareholders nor any Market Makers have a right under the Custodian Agreement to assert a claim against the Custodian. Claims under the Custodian Agreement may only be asserted by the AMC.
- The procedures agreed to with the Custodian contemplate that the Custodian must undertake certain tasks in connection with the inspection of gold and / or silver delivered by Market Makers in exchange for Baskets. The Custodian's inspection includes review of the corresponding bar list to ensure that it accurately describes the weight, fineness, refiner marks and bar number appearing on the gold and / or silver bars, but does not include any chemical or other tests designed to verify that the gold and / or silver received does, in fact, meet the purity requirements. Accordingly, such inspection procedures may not prevent the deposit of gold and / or silver that fails to meet these purity standards. The Custodian will not be responsible or liable to the Trust or to any investor in the event any gold and / or silver otherwise properly inspected by it does not meet the purity requirements.
- The AMC does not insure its gold and / or silver (Underlying gold and / or silver of the scheme). The Custodian maintains insurance on such terms and conditions as it considers appropriate in connection with its custodial obligations under the Custodian Agreement and is responsible for all costs, fees and expenses arising from the insurance policy or policies. The AMC is not a beneficiary of any such insurance and does not have the ability to dictate the existence, nature or amount of coverage. Therefore, Shareholders cannot be assured that the Custodian maintains adequate insurance or any insurance with respect to the gold and / or silver held by the Custodian on behalf of the Trust

C. RISK MITIGATION STRATEGIES

Con. Std. Obs. 9

Investments in debt and derivative securities carry various risks such as inability to sell securities, trading volumes and settlement periods, market risk, interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be mitigated by diversification and hedging.

In order to mitigate the various risks, the portfolio of the Scheme will be constructed in accordance with the investment restriction specified under the Regulations which would help in mitigating certain risks relating to investments in securities market.

The AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Internal limits are defined and judiciously monitored. Risk indicators on various parameters are computed and are monitored on a regular basis. For risk control, the following may be noted:

Risk & Description specific to the Scheme	Risk mitigants / management strategy
Market risk Risk arising due to vulnerability to price fluctuations and volatility, having material impact on the overall returns of the scheme	Endeavour to have a well diversified portfolio of good companies with the ability to use cash/derivatives for hedging
Derivatives risk Various inherent risks arising as a consequence of investing in derivatives.	Continuous monitoring of the derivatives positions and strictly adheres to the regulations and internal norms. Exposure with respect to derivatives shall be in line with regulatory limits and the limits specified in the SID

Credit risk Risk associated with repayment of investment Performance risk Risk arising due to change in factors affecting the market	Investment universe carefully selected to only include issuers with high credit quality Understand the working of the markets and respond effectively to market movements
Concentration risk Risk arising due to over exposure in few securities	Invest across the spectrum of issuers and keeping flexibility to invest across tenor
Liquidity risk Risk arising due to inefficient Asset Liability Management, resulting in high impact costs	Control portfolio liquidity at portfolio construction stage. Having optimum mix of cash & cash equivalents along with the debt papers in the portfolio
Interest rate risk Price volatility due to movement in interest rates	Control the portfolio duration and periodically evaluate the portfolio structure with respect to existing interest rate scenario
Event risk Price risk due to company or sector specific event	Understand businesses to respond effectively and speedily to events. Usage of derivatives: Hedge portfolios, if required, in case of predictable events with uncertain outcomes

While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated.

The AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Ongoing price for subscription (purchase)/ switch-in (from other schemes/ plans of the mutual fund) by investors. This is the price you need to pay for purchase/ switch-in.	Units of the Scheme shall be available for subscription (purchase)/switch- in at the Applicable NAV. In terms of Para 10.4.1 titled to 'Empowering investors through transparency in payment of commission and load structure' of the SEBI Master Circular, SEBI has prohibited charging of entry load for all the schemes of Mutual Fund.
Ongoing Price for redemption This is the price you will receive for redemptions/switch outs.	The Redemption Price of the Units will be based on the Applicable NAV (for respective plan and option of the Scheme) subject to the prevalent exit load provisions. The repurchase price, however, will not be lower than 95% of the NAV subject to SEBI (Mutual Funds) Regulations, 1996 as amended from time to time. <u>The Redemption Price of the Units will be computed as follows:</u> Redemption Price = Applicable NAV (for respective plan and option of the Scheme) * (1-Exit Load as applicable to the investor). The applicable exit load shall be subject to the tenure of investment of the investor in the scheme vis-à-vis the exit load structure applicable when investor had invested in the scheme. Example: An investor invests on April 1, 2024, when the applicable exit load for the scheme was 2% if redeemed within 1-year, else nil. Scenario 1) In case investor redeems before April 1, 2025, then applicable exit load would be 2%. Now suppose the same investor decides to redeem his 1000 units. The prevailing NAV is Rs 25/-. Hence, the sale or redemption price per unit becomes Rs. 24.50/- i.e., $25 \times (1 - 2\%)$. The investor therefore gets $1000 \times 24.50 = \text{Rs. } 24,500/-$. Scenario 2) In case investor redeems on or after April 1, 2025, then applicable exit load would be nil. Now suppose the same investor decides to redeem his 1000 units. The prevailing NAV is Rs 30/-. Hence, the sale or redemption price per unit will be Rs. 30/- i.e., $30 \times (1 - 0)$. The investor therefore gets $1000 \times 30 = \text{Rs. } 30,000/-$.
Requirement of Minimum investors in the Scheme	The Scheme shall have a minimum of 20 investors, and no single investor shall account for more than 25% of the corpus of the Scheme. The two conditions mentioned above shall be complied with in each calendar quarter, on an average basis, as specified by SEBI/AMFI. In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (Mutual Funds) Regulations, 1996, would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at applicable NAV. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days' notice to redeem his exposure over the 25% limit. Failure on the part of the said investor to redeem his exposure over the 25% limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund at the applicable Net Asset Value on the 15th day of the notice period. The Scheme shall adhere to the requirements prescribed by SEBI from time to time in this regard.
